- 1) The amendment filed 11/22/2006 is acknowledged.
- 2) The drawings were received on 11/22/2006. These drawings are acceptable by the Examiner.
- 3) The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- 4) (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5) Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by HAN (5,633,840).
- 6) Claims 1-7 are further rejected under 35 U.S.C. 102(b) as being anticipated by MAEDA (JP, 08-096,533).

The rejection of claims 1 and 2 in previously Office action is repeated herein.

The rejection of claims 1-7 in previously Office action is repeated herein.

7) Applicant's arguments filed 11/22/2006 have been fully considered but they are not persuasive.

First, applicant states that " The Han patent does not teach that the pickup head module is moved toward a spindle motor according to a gradually decreasing speed curve, and therefore fails to teach all of the limitations of independent claim 1. Claim 2 is dependent on claim 1, and should be allowed if claim 1 is allowed ". As indicated in last Office action, figure 3 of HAN shows the optical disc drive move the optical pick-up toward spindle motor (center of the optical disc) in decreasing speed and stop at initial position to read TOC information (steps 101,102,103 and 104).. For that reasons, claims 1 and 2 still anticipated by the reference of HAN.

Second, applicant states that " The Maeda patent does not specify the speed at which the pickup head module moves, and fails to teach that the pickup head module is moved toward a spindle motor according to a gradually decreasing speed curve,". The principle of optical disc drive operation is that when the optical disc drive turn on, the optical pick-up move from outer peripheral to inner ring to look for TOC (spindle motor) at initial position, when the optical pick-up approaches the spindle motor area (TOC area) its speed is reduced and stop at the initial position. The optical disc drive of Maeda must perform this function in order to read and write

information data from the optical disc, therefore, the features as claimed in claims 1-7 are included in Maeda's optical disc drive.

For that reasons, the claims are still rejectable as shown above.

8) THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
